STATUS
of
R·E·A· PROJECTS
as of
February 15, 1940

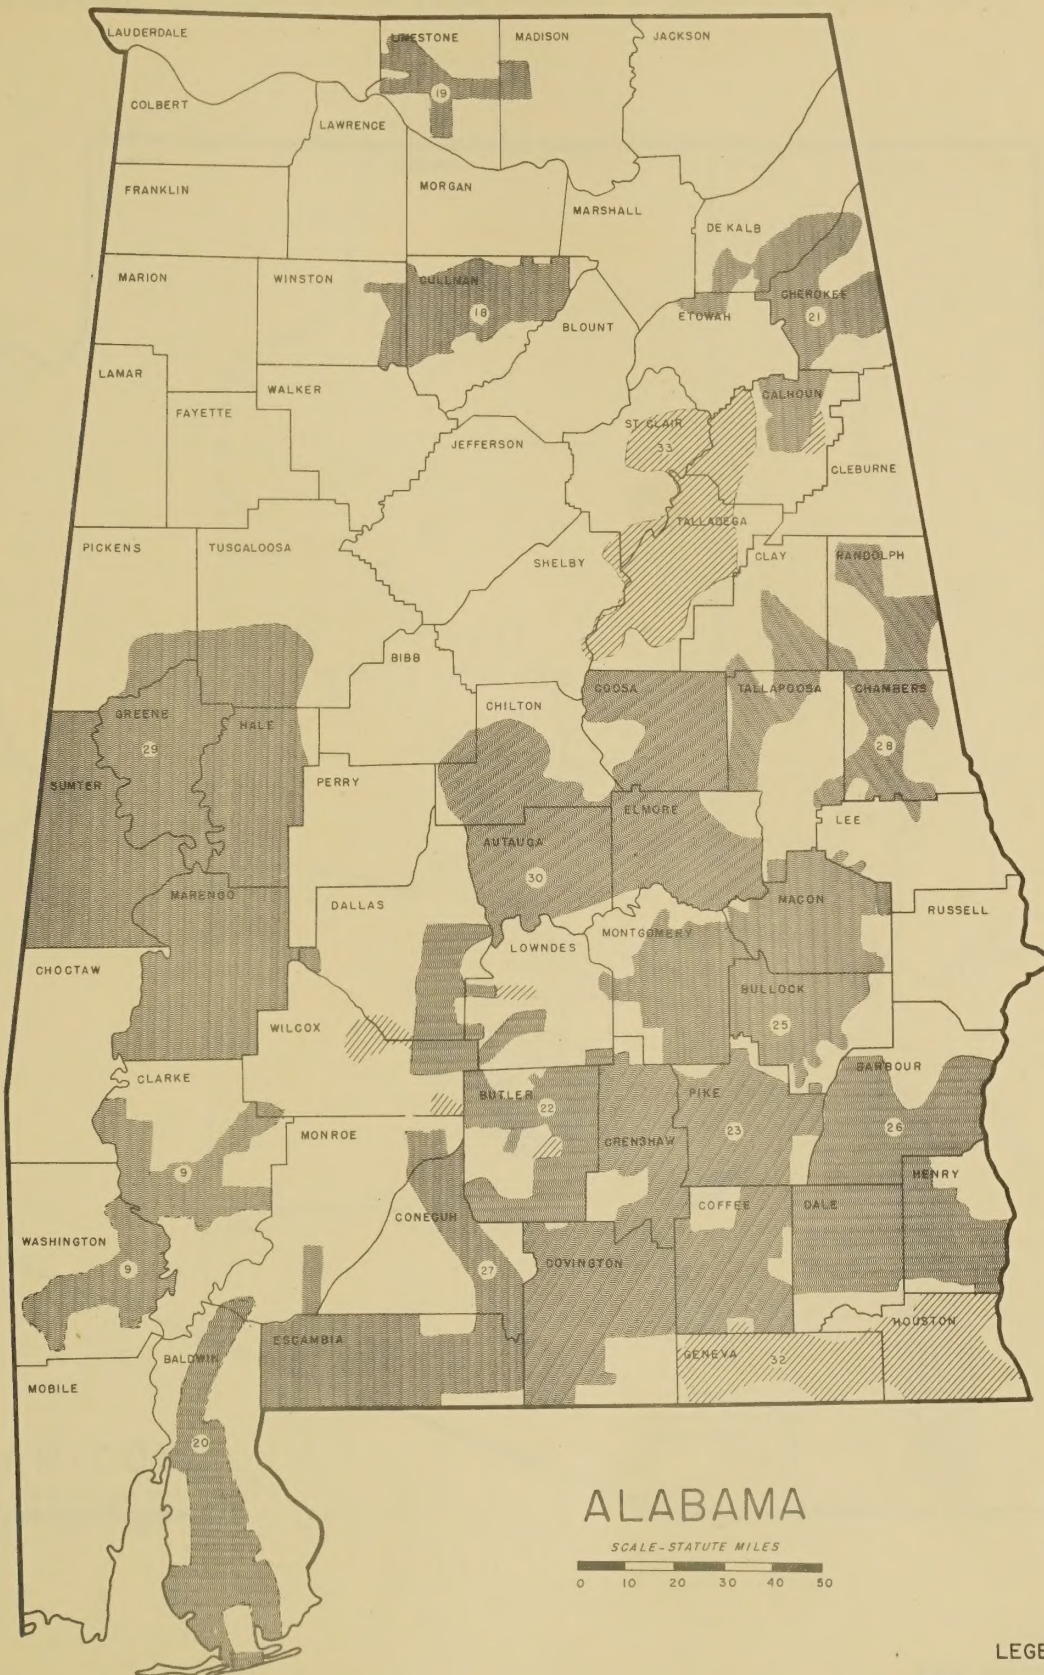

EXPLANATORY NOTE

This edition of the status maps has been prepared from all data available from allotment and construction maps. The base, upon which the patterns were superimposed, was prepared from data obtained from the Bureau of the Census and the Geological Survey.

The patterns for the various projects show the area covered by a particular project even though it is surrounded by others in the same stage of construction. A good example of this is Alabama 23 Pike which is surrounded by Alabama 22 Butler, 25 Bullock, 26 Barbour, and 27 Conecuh. All of these projects are energized. The pattern for Alabama 23 Pike, however, is placed at an angle of approximately 45° , while those for 25 Bullock and 27 Conecuh are horizontal, 22 Butler and 26 Barbour, vertical. It then becomes fairly easy to delimit projects which are close together.
